

Meadow Ridge Basin No. 2

Location

The Meadow Ridge Basin No. 2 stormwater management retrofit project is located off of Uniontown and Rockland Roads in Westminster in the Double Pipe Creek watershed.

Description

The existing facility, which provides no water quality benefits and has steep slopes with are difficult to maintain, has a drainage area of 8.2 acres, 5.35 of which are impervious. The facility will be converted to a surface sand filter with easily maintainable slopes. The existing embankment and riser structure should be utilized in the design. The goal is to provide water quality treatment, channel protection, and management of the 2- and 10- year storms back to forest/meadow conditions.
